Is Chat GPT use making us stupid?
Interesting study from MIT on cognitive offloading when using ChatGPT. Study indicates that LLMs make use faster, yet weaker thinkers. We become weaker independent thinkers. My take on this that although ChatGPT is a great productivity booster, the writer must do his own thinking and writing. Users otherwise sacrifice long term learning for convenience. Link to article in Time attached. <https://lnkd.in/dRMuEjH>.

For those interested in the article but don't have time to read its 200+ pages I highly recommend the the Apple pod the Mayukh Show, which cover research in an accessible way. Youtube link with added link to article attached below.

During the summer of 2024, Yannis Bilias and I penned a survey paper, "Three Score and 15 Years (1948-2023) of Rao's Score Test: A Brief History (<https://lnkd.in/gJHpvpd4>)". I am so surprised to find this amazing YouTube audio-incarnation. As comment to the podcaster creator Mayukh Mukhopadhyay, I wrote: "Many thanks for sharing the YouTube link. Just listened to it. All I can say, the audio narration is as good as my survey paper (with Yannis Bilias), may be, even more, the audio-exposition will reach a wider audience. BTW, the paper passed the stage of Revise & Resubmit, and it has been accepted for publication in the December Issue of Statistics and Applications (journal website: <https://lnkd.in/g8hV6sdq>) in the memory of Dr. C. R. Rao. All the best,.....Anilda"

Got an unexpected email this weekend telling me that my new **Journal of Management** with **Larry Williams** and **Troy Smith** was recently the article of discussion on the Revise and Resubmit science podcast. Our article takes a critical look at parceling, best approaches for your research, and a special focus on parceling when using multidimensional constructs.

Be sure to give it a listen if your life has been feeling a little methods-deficient lately.

Nostalgia marketing - a systematic literature review and future directions

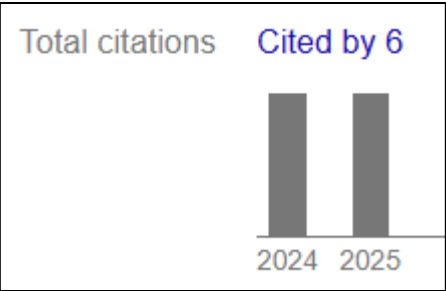

Mayukh Mukhopadhyay

Doctoral Candidate, Department of Marketing, Indian Institute of Management Indore, Indore, India

ABSTRACT
This study addresses the knowledge gap in nostalgia marketing by examining its theoretical foundations, consumer behavior implications, and brand promotion aspects. Through a comprehensive review of 139 Scopus-indexed papers and the use of bibliometric techniques and the Theory-Context-Characteristics-Methodology (TCCM) framework, the researchers analyze the theories, context, features, and methodologies employed in nostalgia marketing. The findings propose a paradigm for collective nostalgia marketing, discussing the benefits and drawbacks of utilizing nostalgia in advertising campaigns and its role in shaping identities and establishing a sense of self through an exploration of the imagined past. The study highlights gaps, restrictions, and ambivalent findings, guiding future research directions and providing practical insights for academics and marketers. By identifying consumer demand for branding campaigns through nostalgia and forestalgia, businesses can capitalize on people’s affinity for the past to build their brands and enhance revenue. The study contributes to a contemporary understanding of nostalgia marketing, emphasizing the importance of collective consumer behavior in this domain.

Abstract

Purpose: This case study explores the evolving landscape of digital art and non-fungible tokens (NFTs) through the journey of Niklas Elmehed, a renowned freelance artist responsible for the Nobel Laureate portraits. It delves into the challenges and opportunities presented by NFTs, touching upon topics such as data privacy, generative AI, and the changing nature of visual communication. **Pedagogical Objective:** The case aims to help learners understand the impact of NFTs on the art world, the cognitive theory of visual communication, and the influence of generative AI. It prompts critical thinking about the future of digital art, personal branding, and strategic choices for artists in the digital era. **Case Positioning and Setting:** This case is suitable for undergraduate and graduate courses in art, digital marketing, and entrepreneurship. It can be used to facilitate discussions on NFT adoption, the intersection of technology and art, and the implications for artists and collectors. The case protagonist is based in Stockholm, Sweden and the timeline is from 1997 to 2023.

Abstract

Purpose: This case study explores the evolution of Be My Eyes, a micro-volunteering platform connecting blind and visually impaired individuals with sighted volunteers. The case analyzes the challenges faced by the founder, Hans Jørgen Wiberg, in balancing the company's social mission with its financial sustainability. It also examines the impact of technological advancements, specifically generative artificial intelligence, on the platform's business model. **Pedagogical Objective:** The case study aims to provide insights into the challenges of balancing social impact and financial sustainability in a social enterprise context. It also explores the potential of technological advancements in shaping business models and discusses the ethical implications of integrating technology into social enterprises. **Case Positioning and Setting:** This case study is suitable for undergraduate and graduate courses in entrepreneurship, social enterprise, and innovation management. It can also be used in courses on technology and society or business ethics. The case is set in Denmark, where Be My Eyes was founded, and covers the period from the platform's inception till the present day.

Mayukh Mukhopadhyay¹

Abstract

This study investigates subscription commerce (SC) in the business-to-business (B2B) marketplace, focusing on transforming legacy incumbents' relationships from one-time transactions to long-term associations. It aims to identify SC drivers and their role in the digital era's production and consumption ecosystem. The research follows a three-part approach. First, it distinguishes SC from electronic commerce and subscription billing. Second, it explores the digital ecosystem (DE), emphasizing the production and consumption ecosystem. Third, it proposes a fuzzy cognitive mapping (FCM) framework to analyse SC drivers, specifically emphasizing value derivation from data in the DE transition. This study pioneers the analysis of SC drivers within B2B contexts, showcasing SC's substantial role in unlocking value for legacy incumbents, particularly through the innovative FCM framework. It stands out as the first comprehensive analysis of SC drivers in B2B settings, showcasing its contribution to the digital transformation of legacy incumbents using FCM. This research offers crucial insights for legacy firm managers, aiding in digital transformation strategies, whether through in-house development or SC procurement. Additionally, consultants can leverage these drivers to support firms in their digitization efforts.

Keywords

Subscription commerce, digital ecosystem, fuzzy cognitive mapping, legacy incumbents, digital transformation

Date Written: October 1, 2021

Abstract

Non Fungible Token (NFT) Industry has been witnessing multi-million dollar trade in recent times. With rapid innovation of the NFT market environment by technology, innovation, and decentralization, it is becoming hard to distinguish between genuine NFT from fads and scams. This article discuss the NFT market microstructure, with a focus on price formation, market structure, transparency, and applications to other financial areas. Market manipulation in NFT market with the context of wash-sale patterns has also been surveyed. The article concludes by providing pointers on due-diligence activity that can be adopted by investors to mitigate NFT trading risk.

Keywords: Market Microstructure, NFT, ERC721, Wash-Trading

Who Moved My Grocery, in 10 Minutes? - A Light on Indian Dark Stores

Case Ref CDC-GM-110, LIBA National Case Development Conference 2022

10 Pages • Posted: 19 Apr 2022 • Last revised: 22 Apr 2022

[Mayukh Mukhopadhyay](#)
Indian Institute of Management (IIM), Indore; Indian Institute of Technology (IIT), Kharagpur - Vinod Gupta School of Management

Date Written: February 18, 2022

Abstract

Theoretical basis: The case explores the evolution of eCommerce into qCommerce (q for quick) in the context of post pandemic online grocery sector in India. The case enables students to revisit Hollander and McNair's hypothesis on the wheel of retailing in the era of machine learning, predictive analytics, and hyperlocal service using dark stores.

Research methodology: The case is derived from secondary sources, including publicly available reports and information about various qCommerce platforms.

Case synopsis: The case begins with a brief introduction to the concept of dark stores and where does it fit in the machinery of qCommerce. Then we try to understand why Indian consumer are embracing this revolution in online delivery model. We then try to explore how this idea of dark store started during the pandemic lockdown by a start-up Zepto run by two Stanford dropout teenagers. We then try to understand what the big players in this sector are trying in order to mitigate this innovative disruption. We also highlight three specific problems related to human capital, sustainability, and consumer behaviour. We end this case by summarizing the lessons learnt from these problems, how to resolve them, and finally few recommendations on the projected future of hyper localization.

Complexity academic level: The case is written for management undergraduates enrolled in a service marketing or supply chain course. As the case focus on India, it could also be used in local entrepreneurship courses.

Keywords: Dark Store, Q-Commerce, D2C Model, eGrocery, Hyper localization

JEL Classification: M10, M11, M13
